

Dropify Documentation

- ✓ guideQuick start
- ✓ INSTALL DROPIFY- **\$ npm install dropify**
[Note: Node Js install before use it]

Step 1: Make a file in your public folder In this name **dropify.js**

Step 1.1: Put the script on your master blade and dynamic by following your public folder.

Ex: {{asset('backend/js/dropify.js')}}

```
<script src="{{ asset('js/dropify.js') }}"></script>
```

Step 2: Past CDN for Quick Use Dropify

```
<!-- Include jQuery -->
<script src="https://code.jquery.com/jquery-3.6.0.min.js"></script>
<!-- Include Dropify CSS and JS -->
<link href="https://cdnjs.cloudflare.com/ajax/libs/Dropify/0.2.2/css/dropify.min.css"
rel="stylesheet">
<script
src="https://cdnjs.cloudflare.com/ajax/libs/Dropify/0.2.2/js/dropify.min.js"></script>
```

Step 3: Define input tag **class=" dropify"** in your form

```
<script>
    $('.dropify').dropify({
    messages: {
        'default': 'Drag and drop a file here or click',
        'replace': 'Drag and drop or click to replace',
        'remove': 'Remove',
        'error': 'Ooops, something wrong happended.'
    }
    });
</script>
```
